What are the key risks that are specific to the Issuer?

Risk exposure to debt securities issued by sovereign States

The market tensions regarding government bonds and their volatility, as well as Italy's rating downgrading or the forecast that such downgrading may occur, might have negative effects on the assets, the economic and/or financial situation, the operational results and the perspectives of the Bank. Intesa Sanpaolo Group results are and will be exposed to sovereign debtors, in particular to Italy and certain major European Countries.

Risks related to legal proceedings

The risk arising from legal proceedings consists of the possibility of the Bank being obliged to pay any sum in case of unfavourable outcome.

Risks related to the economic/financial crisis and the impact of current uncertainties of the macro-economic context

The future development in the macro-economic context may be considered as a risk as it may produce negative effects and trends in the economic and financial situation of the Bank and/or the Group. Any negative variations of the factors that affect the macro-economic framework, in particular during periods of economic-financial crisis, could lead the Bank and/or the Group to suffer losses, increases of financing costs, and reductions of the value of the assets held, with a potential negative impact on the liquidity of the Bank and/or the Group and its financial soundness.

Credit risk

The economic and financial activity and soundness of the Bank depend on its borrower's creditworthiness. The Bank is exposed to the traditional risks related to credit activity. Therefore, the clients' breach of the agreements entered into and of their underlying obligations, or any lack of information or incorrect information provided by them as to their respective financial and credit position, could have negative effects on the economic and/or financial situation of the Bank.

Market risk

The market risk is the risk of losses in the value of financial instruments, including the securities of sovereign States held by the Bank, due to the movements of market variables (by way of example and without limitation, interest rates, prices of securities, exchange rates), which could determine a deterioration of the financial soundness of the Bank and/or the Group. Such deterioration could be produced either by negative effects on the income statement deriving from positions held for trading purposes, or from negative changes in the FVOCI (Fair Value through Other Comprehensive Income) reserve, generated by positions classified as financial activities evaluated at fair value, with an impact on the overall profitability.

Liquidity risk of Intesa Sanpaolo

Although the Bank constantly monitors its own liquidity risk, any negative development of the market situation and the general economic context and/or creditworthiness of the Bank, may have negative effects on the activities and the economic and/or financial situation of the Bank and the Group. The liquidity risk is the risk that the Bank is not able to satisfy its payment obligations at maturity, both due to the inability to raise funds on the market (funding liquidity risk) and of the difficulty to disinvest its own assets (market liquidity risk).

Operational risk

The Bank is exposed to several categories of operational risk which are intrinsic to its business, among which those mentioned herein, by way of example and without limitation: frauds by external persons, frauds or losses arising from the unfaithfulness of the employees and/or breach of control procedures, operational errors, defects or malfunctions of computer or telecommunication systems, computer

¹⁰ Transitional

¹¹ Fully loaded (the IFRS 9 transition period ended on 31 December 2022 and the amounts shown in the column as at 30 June 2023 are therefore comparable with the previous IFRS 9 fully loaded period).

¹² Applying the regulatory measure introduced by the ECB and effective from 12 March 2020. The SREP requirement comprises Capital Conservation Buffer, O-SII Buffer and Countercyclical Capital Buffer. Countercyclical Capital Buffer is calculated taking into account the exposure as at 30 June 2023 in the various countries where the Group has a presence, as well as the respective requirements set by the competent national authorities and relating to 2025, where available, or the most recent update of the reference period (requirement was set at zero per cent in Italy for the first nine months of 2023).

virus attacks, default of suppliers with respect to their contractual obligations, terrorist attacks and natural disasters. The occurrence of one or more of said risks may have significant negative effects on the business, the operational results and the economic and financial situation of the Bank.

Risk related to the development of the banking sector regulation and the changes in the regulation on the solution of banking crises

The Bank is subject to a complex and strict regulation, as well as to the supervisory activity performed by the relevant institutions (in particular, the European Central Bank, the Bank of Italy and CONSOB). Both the aforementioned regulation and supervisory activity are subject, respectively, to continuous updates and practice developments. Furthermore, as a listed Bank, the Bank is required to comply with further provisions issued by CONSOB. The Bank, besides the supranational and national rules and the primary or regulatory rules of the financial and banking sector, is also subject to specific rules on anti-money laundering, usury and consumer protection. Although the Bank undertakes to comply with the set of rules and regulations, any changes of the rules and/or changes of the interpretation and/or implementation of the same by the competent authorities could give rise to new burdens and obligations for the Bank, with possible negative impacts on the operational results and the economic and financial situation of the Bank.

The Italy CPI FOI Ex Tobacco Unrevised Index is provided by ISTAT - Istituto Nazionale di Statistica. As far as the Issuer is aware, the Italy CPI FOI Ex Tobacco Unrevised Index does not fall within the scope of the Benchmark Regulation by virtue of Article 2 of that Regulation and, as consequence, ISTAT - Istituto Nazionale di Statistica is not currently required to obtain any authorisation or registration (or, if located outside the European Union, recognition, endorsement or equivalence) required and/or imposed by the Benchmark Regulation itself.

Seniority of the securities

The Certificates constitute direct, unsubordinated, unconditional and unsecured obligations of the Issuer and, unless provided otherwise by law, rank *pari passu* among themselves and (save for certain obligations required to be preferred by law) rank equally with all other unsecured obligations (other than subordinated obligations, if any) of the Issuer from time to time outstanding.

After the Issue Date, application may be made to list the Securities on other stock exchanges or regulated markets or to admit to trading on other trading venues as the Issuer may decide.

What are the key risks that are specific to the securities?

The Certificates may not be a suitable investment for all investors

Certificates are complex financial instruments. A potential investor should not invest in Certificates which are complex financial instruments unless it has the expertise (either alone or with the help of a financial adviser) to evaluate how the Certificates will perform under changing conditions, the resulting effects on the value of the Certificates and the impact this investment will have on the potential investor's overall investment portfolio.

General risks and risks relating to the Underlying

The Securities involve a high degree of risk, which may include, among others, interest rate, foreign exchange, time value and political risks. Purchasers should be prepared to sustain a partial loss of the purchase price of their Securities. Fluctuations in the value of the relevant Underlying will affect the value of the Securities.

Certain considerations associated with Index Securities

Securities that are linked to an Index as Underlying are associated with risks for the Securityholders comparable to those of a direct investment in a comparable portfolio of asset classes underlying the respective Index. The development of the price of the Index depends on the individual index components of which the relevant Index is comprised. The development of the price of the individual index components depends on macroeconomic factors, such as interest rates and price levels on the capital markets, currency developments, political factors as well as, in the case of shares as index components, company-specific factors such as earnings position, market position, risk situation, shareholder structure and distribution policy. In the case of an adverse development of such macroeconomic factors this may adversely affect the price development of the index components and the Index as a whole and accordingly, the value of the Securities and/or any other payments to be made under the Securities.

Risk related to the Digital Level

In relation to the Certificates, the Issuer has set, at its own discretion, the Digital Level. The higher the Digital Level is set in respect of the Initial Reference Value, the greater the possibility that the Digital Event will not occur and therefore that the relevant Digital Amount will not be paid.

Impact of implicit fees on the Issue Price/Offer Price

Investors should note that implicit fees (e.g. placement commissions/distribution commissions, structuring fees) may be a component of the Issue Price/Offer Price of the Securities, but such fees will not be taken into account for the purposes of determining the price of the relevant Securities in the secondary market. Investors should also take into consideration that if Securities are sold on the secondary market immediately following the offer period relating to such Securities, the implicit fees included in the Issue Price/Offer Price on initial subscription for such Securities will be deducted from the price at which such Securities may be sold in the secondary

market.

Possible illiquidity of the Securities in the secondary market

It is not possible to predict the price at which Securities will trade in the secondary market or whether such market will be liquid or illiquid. The Issuer, or any of its Affiliates may, but is not obliged to, at any time purchase Securities at any price in the open market or by tender or private treaty. Any Securities so purchased may be held or resold or surrendered for cancellation. The Issuer or any of its Affiliates may, but is not obliged to, be a market-maker for an issue of Securities. Even if the Issuer or such other entity is a market-maker for an issue of Securities, the secondary market for such Securities may be limited. To the extent that an issue of Securities becomes illiquid, an investor may have to wait until the Exercise Date to realise value.
